## **Psychology RESEARCH AREA**

**Feb 2016 – April 2016**

The study examined the influence of sex and emotional stability on intention to abstain from unprotected sex among adolescents in Ibadan north local government, oyo state. A purposive sample of 205 adolescents with 111 males and 94 females participated in the study. The age range between 12 and 20 years with a mean of 16.86 and standard deviation of 2.30. The result showed that female respondents significantly scored higher on intention to abstain from unprotected sex than their male counterpart. It was concluded that sex and emotional stability are fundamental influencers of intention to abstain from unprotected sex.
